## SUPERCONDUCTING COIL SYSTEM

## ABSTRACT OF THE DISCLOSURE

A superconducting coil system comprising a superconducting coil and a normal conducting coil, the

5 normal conducting coil having a current time constant (L<sub>2</sub>/R<sub>2</sub>) which is larger than L<sub>1</sub>/R<sub>1</sub>, or the time constant at which the current through the superconducting coil decays rapidly after the conductors in the superconducting coil made a transition to the normal conducting state, in which

10 L<sub>1</sub> and L<sub>2</sub> represent the self-inductances of the superconducting coil and the normal conducting coil, respectively, R<sub>1</sub> represents the resistance for causing rapid decay of the current flow through the superconducting coil, and R<sub>2</sub> represents the resistance of the normal conducting coil.
